

**Product Specifications**

**S4000** is a thermosetting plastic material reinforced with glass fiber.

**Material Specifications:**

- Long-term temperature resistance
- Excellent insulating capability
- High compressive strength

**Fields of Application**

**S4000** is used as an insulating sheet or mechanical component in presses for the rubber, plastic, and wood molding industries.

**S4000** has a major advantage compared to other inorganic insulating materials: it provides the same insulating effect with a reduced thickness.

**Supply Details:**

- **Standard Thickness:** 5-30 mm
- **Premium Finish Available**

The values in this technical data sheet are standard values and are not part of any contract. Specifications may change depending on modifications in the operating environment.
